SA Burke reviewed the laboratory report and noted the following:

Lab Item #12, a Taurus 9mm Luger semi-automatic pistol, SN: AEH630415 in Ricardo (Ricardo) Yuuki Davis' possession during the Officer-Involved Critical Incident (OICI) involving Parma Police Department (PPD) Officers, had been deemed to be operable. There was no comparison as the firearm Ricardo had in his possession was not fired during the OICI.

Findings:

Item Description	Comparison	Conclusion
Item #12: Taurus Pistol	N/A	Operable

Lab Item #13, a Glock 9mm, semi-automatic pistol, Model 45, SN: [REDACTED] fired by PPD by [REDACTED] during the OICI involving Ricardo had been deemed to be operable. Lab Items #5-8, four (4) fired 9mm Luger cartridge casings were source identified from Lab Item #13. Lab Item #15, one (1) fired bullet (15EB1) recovered from Ricardo during the autopsy was found to be source identified from Lab Item #13.

Findings:

Comparison Conclusion Scale

The following lists the conclusions a Forensic Scientist may reach when performing comparisons. In reaching a conclusion, a Forensic Scientist considers the similarities and dissimilarities and assesses the relative support of the observations under the following two propositions: the evidence originated from the same source or from a different source.

A Forensic Scientist may utilize their knowledge, training, and experience to evaluate how much support the observed similarities or dissimilarities provide for one conclusion over another. A conclusion shall not be communicated with absolute certainty. It is an interpretation of observations made by the Forensic Scientists and shall be expressed as an expert opinion.

1	Source Identification	The observations provide extremely strong support for the proposition that the evidence originated from the same source and the likelihood for the proposition that the evidence arose from a different source is so remote as to be considered a practical impossibility.
2	Support for Same Source	The observations provide more support for the proposition that the evidence originated from the same source rather than different sources; however, there is insufficient support for a Source Identification. The degree of support may range from limited to strong or similar descriptors of the degree of support. Any use of this conclusion shall include a statement of the factor(s) limiting a stronger conclusion.
3	Inconclusive	The observations do not provide a sufficient degree of support for one proposition over the other. Any use of this conclusion shall include a statement of the factor(s) limiting a stronger conclusion.
4	Support for Different Source	The observations provide more support for the proposition that the evidence originated from different sources rather than the same source; however, there is insufficient support for a Source Exclusion. The degree of support may range from limited to strong or similar descriptors of the degree of support. Any use of this conclusion shall include a statement of the factor(s) limiting a stronger conclusion.
5	Source Exclusion	The observations provide extremely strong support for the proposition that the evidence originated from a different source and the likelihood for the proposition that the evidence arose from the same source is so remote as to be considered a practical impossibility; or the evidence exhibits fundamentally different characteristics
