VIDEO REVIEW PROCESS

SA Moran downloaded a working copy of the video presentations from the Special Investigations Unit (SIU) shared drive to review and process in a working copy format and folder. SA Moran created a derivatives folder and a notes folder. OOCIC created eight video presentations, but SA Moran only reviewed four of the video presentations. The eight OOCIC videos were labeled:

Video	Reviewed?
23-00059 Cruiser Camera Presentation – Speed Views	No
23-00059 Cruiser Camera Presentation	Yes
23-00059 Dryden Presentation – Speed Views	No
23-00059 Dryden Presentation	Yes
23-00059 Synchronized Timeline Presentation – Speed Views	No
23-00059 Synchronized Timeline Presentation	Yes
23-00059 Wohlheter Presentation – Speed Views	No
23-00059 Wohlheter Presentation	Yes

SA Moran used Amped Five video software for the review. SA Moran placed four video files into Amped Five. SA Moran bookmarked images from each of the four video presentations reviewed. SA Moran also selected some sequenced images for demonstrative purposes. The images were bookmarked based upon the best available visual and audio cues.

Each video presentation should be viewed and evaluated independently of the others.

ADDITIONAL FACTORS TO CONSIDER WHEN EVALUATING DIGITAL MULTIMEDIA EVIDENCE (DME)

Based upon SA Moran's training and experience, the following factors should be considered when evaluating the available video evidence:

- The speed of this incident is remarkable.
- The speed and complexity of rapidly evolving situation(s) that occur during use-of-force encounters are difficult concepts to comprehend by only watching the video.
- Video and audio recording devices record more information about a particular scene or incident than the person(s) involved in the event can process during the critical incident.
- Video and audio recording devices rarely record an event from the same perspective of the officer(s) or subject(s) involved.
- It captures the action but not the perception, decision-making, focus nor intent of the officer(s).
- Video recordings often miss tactile cues or other actions of a subject.
- Video and audio recording devices record within the video and sound capabilities available, and they record objectively.
- Video and audio recordings lack the history, perspective and interest of the people involved.
- The movements, positions, angles, obstacles, lighting, and distance from the incident are also factors that need serious consideration.
- Video recordings are for storage and review.
- Video recordings capture light and create a digital representation of reality (two-dimensional video compared to three-dimensional reality).
- Video and audio recordings are only components of an investigation and should not be the only evidence relied upon.
- All available evidence, statements and other information must be evaluated alongside the video recordings available.

OVERHEAD MAP IMAGE FOR REFERENCE

Below is a screen capture of an overhead map from Bing Maps. This shows the area of the immediate scene, the flight path of the subject and follow path of the officers, and the location of the initial call-for-service. This was provided to assist the reviewer with an understanding of the area. See the image below:

REVIEW OF 23-00059 DRYDEN PRESENTATION

This video presentation consisted of 4647 frames (including 0 frame) and was 00:02:35:054 long. OOCIC FVA Loomis added a frame counter in the lower left portion of the video screen. He also added an audio waveform effect (blue waveform) in the middle lower portion of the screen. He also added a timecode effect in the middle right portion of the screen.

Timing Estimates

OOCIC FVA Loomis noted that the video presentation was playing at 29.97fps (frames-per second).

As part of this in-depth video review, SA Moran created a spreadsheet documenting many of the significant events noted during the video review. The colors in this report correspond with colors used in the spreadsheet for significant events and timing. (See spreadsheet labeled, "Timing Estimate Summary – Dryden" for details.)

SA Moran also used the spreadsheet to count the frames between the marked image frames to determine approximately how much time elapsed between certain actions and events. SA Moran used the formula, =COUNTA(COLUMN LETTER BEGINNING ROW NUMBER:SAME COLUMN LETTER END ROW NUMBER) to calculate the number of frames between marked image frames.

SA Moran multiplied the total number of frames in the columns by 0.033333333 (1/30 of a second) to determine the approximate elapsed time between the marked image frames. The time was rounded up or down to the nearest hundredth place to make it easier to comprehend. For example, 23 frames multiplied by 0.033333333 equaled 0.766666667 of a second. This number was rounded to 0.77 of a second.

SA Moran noted the following during the review:

This video file consisted of 4647 frames (including 0 frame) and was 00:02:35:054 long. The BWC videos from Officer Dryden and Officer Wohlheter were synchronized. OOCIC FVA Loomis added a frame counter in the lower left portion of the video screens. He also added audio waveform effects (blue waveforms) underneath each video. He also added a timecode effect in middle lower portion of the screen.

SA Moran did not calculate any timing estimates from this presentation. SA Moran bookmarked relevant images based upon the review of Officer Dryden's BWC video presentation documented above.

REVIEW OF 23-00059 CRUISER CAMERA PRESENTATION

This video presentation consisted of 4645 frames (including 0 frame) and was 00:02:34:988 long. OOCIC FVA Loomis added a frame counter in the lower left portion of the video screen. He also added an audio waveform effect (blue waveform) in the middle lower portion of the screen. He also added a timecode effect in the middle right portion of the screen.

Timing Estimates

OOCIC FVA Loomis noted that the video presentation was playing at 29.71 fps (frames-per second).

As part of this in-depth video review, SA Moran created a spreadsheet documenting many of the significant events noted during the video review. The colors in this report correspond with colors used in the spreadsheet for significant events and timing. (See spreadsheet labeled, "Timing Estimate Summary – Cruiser" for details.)

SA Moran also used the spreadsheet to count the frames between the marked image frames to determine approximately how much time elapsed between certain actions and events. SA Moran used the formula, =COUNTA(COLUMN LETTER BEGINNING ROW NUMBER:SAME COLUMN LETTER END ROW NUMBER) to calculate the number of frames between marked image frames.

SA Moran multiplied the total number of frames in the columns by 0.033333333 (1/30 of a second) to determine the approximate elapsed time between the marked image frames. The time was rounded up or down to the nearest hundredth place to make it easier to comprehend. For example, 23 frames multiplied by 0.033333333 equaled 0.766666667 of a second. This number was rounded to 0.77 of a second.

SA Moran noted the following during the review:

RELATED TIMING INFORMATION FOR DRYDEN AND CRUISER PRESENTATIONS

SA Moran reviewed the timing spreadsheets for the Dryden video presentation and the Cruiser video presentation and noted the following:

Dryden

TIMING ESTIMATE SUMMARY	FRAMES	1/30TH	TIME (SECONDS)	ROUNDED
Neff in grass, arms extended, light observed (1st) (00:00:59:20) to Dryden gunshot 1 (00:01:01:13).	53	0.03333333	1.766666667	1.77

Cruiser

Start of (1st) muffled percussive-like sounds (00:01:00:02) to beginning (1st) of louder, repetitive percussive-like sounds (00:01:01:25).	53	0.03333333	1.766666667	1.77
--	----	------------	-------------	------

These estimates could mean that Neff fired three gunshots from his pistol prior to Dryden firing his first gunshot. Dryden's BWC (possibly) visually captured two of the three gunshots possibly fired by Neff. The cruiser camera audio stream possibly captured three gunshots fired by Neff. Both timing spreadsheets (PDF versions) are attached to this report.
